DID YOU KNOW?

- The furnace integration kit has a connector for the leak detection system from the coil and to the furnace and thermostat.
- The furnace integration kit includes a wiring harness to connect to the RDS system of the coil and send response to the FN blower motor to run continuously in case of leak as the leak mitigation protocol.
- All Daikin, Goodman, and Amana® furnaces (the listed furnace SKUs are all R410A FN) all are ready to work with R-410A outdoor without anything and R-32 outdoor systems with this furnace integration kit.
- When paired with R-32 coils, our furnaces and modular blowers meet mitigation protocols using the Furnace Integration Kit (required only for older R-410A system; not needed with new furnaces).

*Pick up only, no deliveries. No rainchecks. Offer may not be combined with any additional offers. Promotion not applicable to PE dealers. Additional restrictions apply, ask for full details. Valid only at participating locations. Offer may be altered or discontinued without advance notice. While supplies last. Void where prohibited by law. Offer valid thru 12/31/2025.

Our continuing commitment to quality products may mean a change in specifications without notice.
